

SINCE 2002

MARBLE BROKER

Natural Stone Project Book

Selection • Engineering • Supply • Installation

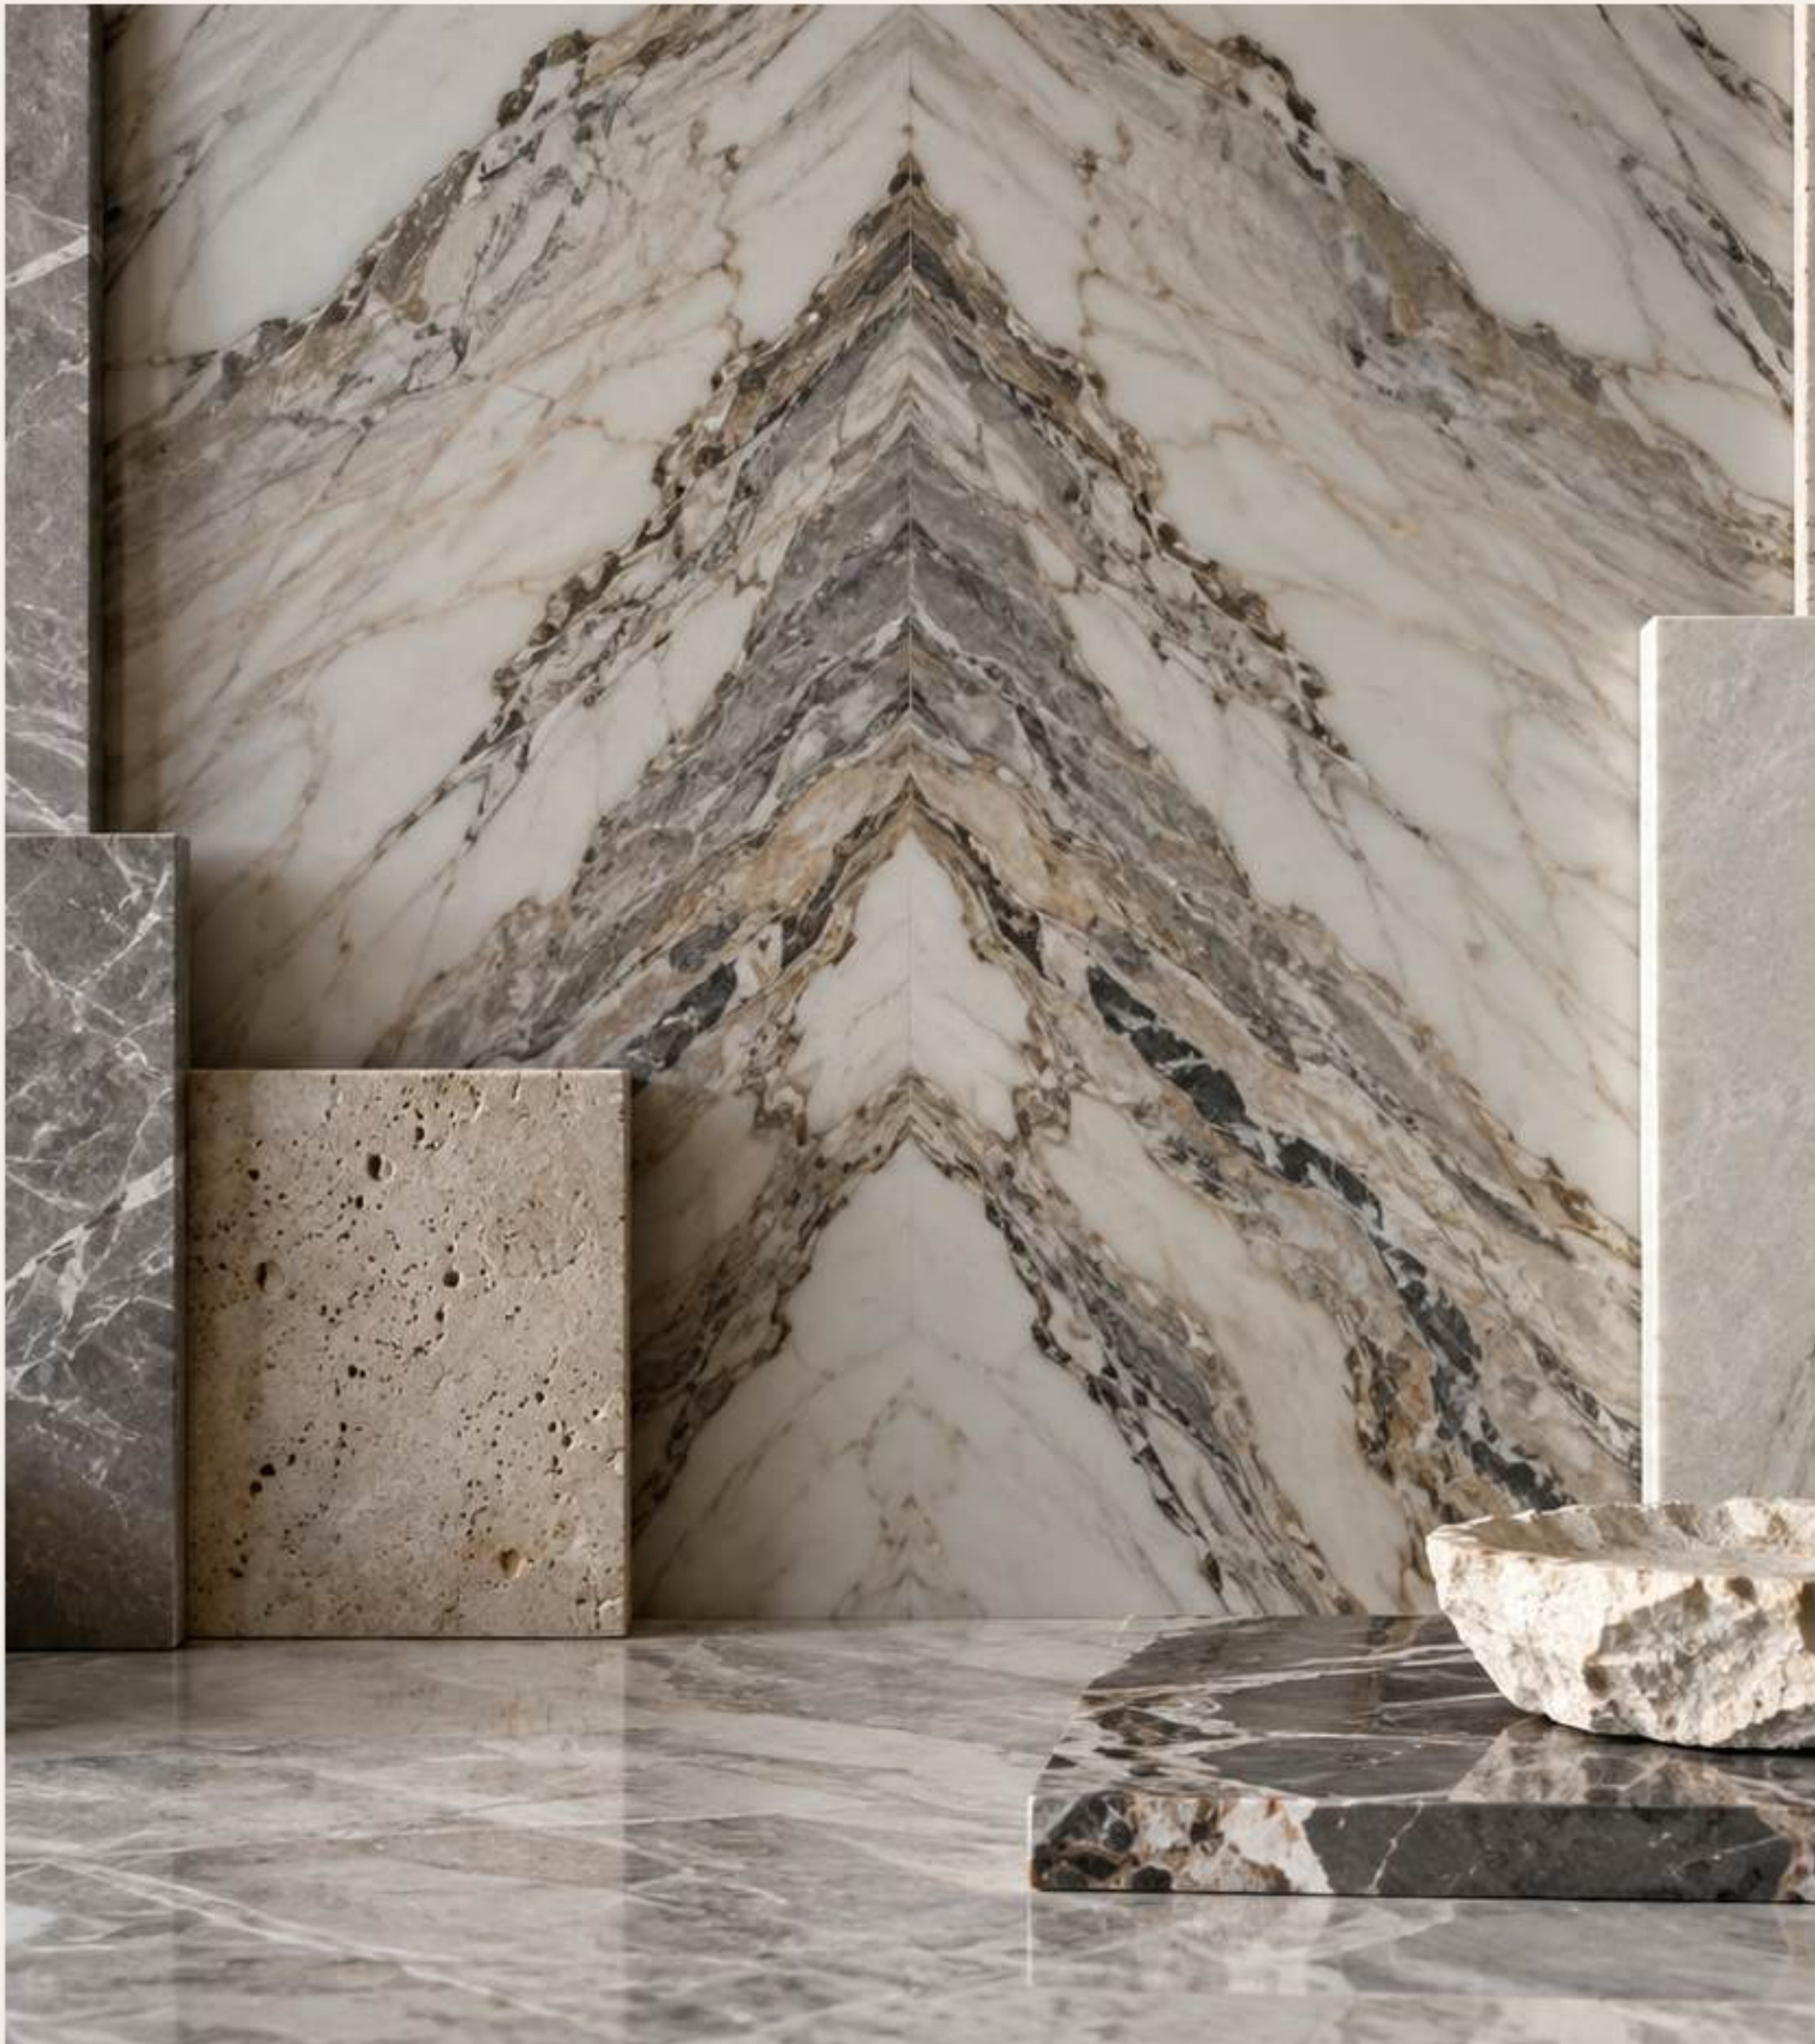

EDITORIAL STATEMENT

Stone is never only a finish.

It is a decision about atmosphere, proportion, durability and execution. Marble Broker works at the intersection of material selection, technical control and site reality — translating natural stone into finished architectural experience.

For hotels, villas, business centers and distinctive private projects.

PROFILE

Twenty four years of natural stone project experience.

Founded in 2002, Marble Broker has grown from hands-on stone selection and installation into a project-driven platform for international natural stone works.

50+ five-star hotel projects
120,000 m² yearly processing experience
Projects across Europe, the Middle East, Asia and the USA

HOSPITALITY

Lobby, spa and public-area stone; with hotel discipline.

The work is not only about beautiful slabs. It is about sequence, tolerance, protection, repairability and installation flow while project pressure is still active.

Marble floors • wall cladding • counters • stairs •
bathrooms

PRIVATE SUITES

Bathrooms require precision.

Bookmatch direction, veining, edge details, waterproofing logic and final site dimensions must all be controlled as one system.

Measured drawing • dry lay • numbering • cut-to-size control

PROJECT METHOD

A controlled path from quarry to site.

- 01 Material sourcing and block/slab selection
- 02 Shop drawings and quantity control
- 03 Factory production and quality control
- 04 Packing, labeling and logistics
- 05 Site coordination, cutting and installation support

The difference is not one stage; it is the discipline between stages.

VILLAS • RESIDENCES • MUSEUMS

Bespoke interiors need quiet confidence.

Villas, residences and private museums demand a more refined stone language: fewer errors, stronger mock-ups, better sequencing and careful protection of every visible edge.

Less noise, more precision: luxury in stone is perceived through detail.

Corners, risers, skirtings, returns, borders and lighting junctions define the perceived quality of natural stone.

SELECTED PROJECT GEOGRAPHY

Built through site experience.

London • Dubai • Abu Dhabi • Moscow
• New York
Oman • Kuwait • Montenegro • North
Macedonia
Georgia • Cyprus • Equatorial Guinea •
Indonesia

Project references include five-star hotels, casinos, villas,
museums, places of worship and public/private landmark
interiors.

Natural Stone. Engineered Experience.

Project selection • shop drawings • supply • installation coordination
